

Harrods

PRIVATE LABEL · CONTRACT MANUFACTURING

We bring your **brand to life.**

Beauty, personal care, pet and home care ranges, manufactured around your vision.

500+	1M	25,000
Clients	Units/month	Sqft facility

Crafting your next collection.

A manufacturing partner for beauty, personal care and wellness brands. From a product idea to finished goods, we coordinate the details that bring your range to market.

About Us

Based in Ambala, Haryana, India, Harrods Health supports brands with private label, third-party and contract manufacturing services.

Our work brings together formulation, packaging, manufacturing and delivery through one coordinated partner.

Build ranges across skin, body, hair, baby, men’s, lip and pet care, alongside hospitality and home-care collections.

- Custom formulation
- Packaging guidance
- Quality checks
- Global delivery support

From sample to dispatch
A single point of contact with defined review and approval stages.

Built for your brand
Flexible formats, packaging choices and a coordinated finished collection.

Your brand.

Our machinery capabilities.

Equipment and operations supporting manufacturing, filling and finished packing.

	MACHINERY / EQUIPMENT	FUNCTION
01	**Bulk Mixing Tanks**	Bulk preparation and mixing to the approved formulation.
02	**Cream & Lotion Mixing Equipment**	Mixing and processing of cream and lotion formats.
03	**Automatic Filling Equipment**	Filling operations coordinated with the selected bottles, jars and product format.
04	**Tube Filling & Sealing Equipment**	Tube filling and sealing for the approved product and pack.
05	**Pouch Filling & Packing Equipment**	Filling and packing of compatible pouch formats.
06	**Induction Sealing Equipment**	Induction sealing of compatible containers and closures.
07	**Automatic Bottle/Jar Labelling**	Automatic application of labels to bottles and jars.
08	**Batch Coding Equipment**	Batch coding to support identification and traceability.
09	**Wrapping & Packing Equipment**	Wrapping and packing of finished products for dispatch.
10	**Laboratory & QC Equipment**	Production-batch checks, including pH, viscosity, weight and microbial checks.
11	**Air Handling Unit (AHU)**	Air handling and circulation for the manufacturing environment.

POUCHES
Filling & packing

Equipment setup and production planning are aligned with the approved formulation, quantity and packaging brief.

Mixing & bulk preparation

Equipment for preparing liquid blends and cream or lotion batches before filling.

01 Bulk Mixing Tanks

Combine formulation ingredients into a bulk batch for the next production stage.

PROCESS ROLE

Ingredient addition and mixing follow the approved formulation. The prepared bulk moves to in-process quality checks.

PRODUCT APPLICATIONS

Liquid product ranges such as shampoos, body washes, hand washes and cleansers, according to the selected formula.

OUTPUT Mixed bulk product for batch checks and filling.

Process focus: ingredient blending, appearance and product consistency.

02 Cream & Lotion Mixing Equipment

Mix and process cream and lotion formulations to the selected product texture.

PROCESS ROLE

Formulation components are blended and processed for the approved consistency. Quality checks support the move to filling.

PRODUCT APPLICATIONS

Face creams, body lotions, and hand and foot creams within the approved cream and lotion range.

OUTPUT Prepared cream or lotion for quality checks and filling.

Process focus: texture, appearance, pH and viscosity, as applicable to the formula.

From formulation to a finished batch

The approved sample guides production. Mixing is coordinated with the product brief, followed by batch checks, filling and finishing.

Bulk mixing and cream/lotion mixing are equipment groups; the production route depends on the formulation.

Filling equipment

Filling operations connect the prepared bulk with the chosen retail packaging.

03 Automatic Filling Equipment

Dispenses prepared product into the selected bottle or jar format.

PACK FORMAT

Bottles and jars selected for the formulation.

PROCESS ROLE

Product dosing and filling to the agreed pack quantity.

OUTPUT

Filled containers ready for closure and finishing.

Setup follows the formula, product consistency, fill quantity and container opening.

04 Tube Filling & Sealing Equipment

Combines tube filling with sealing for a completed tube pack.

PACK FORMAT

Compatible cosmetic tubes for the chosen product.

PROCESS ROLE

Fill the tube and seal its open end.

OUTPUT

Filled, sealed tubes for coding and packing.

Used for approved tube-pack products; tube material and closure follow the packaging brief.

05 Pouch Filling & Packing Equipment

Fills and packs compatible flexible pouches for the selected product.

PACK FORMAT

Pouches matched to the product and pack brief.

PROCESS ROLE

Product dosing, pouch filling and packing.

OUTPUT

Filled pouch packs for finishing and dispatch.

Pouch construction and fill quantity are selected for the approved formulation.

Line setup and production output depend on the formula, pack format and order plan.

Sealing, coding & packing

Finishing equipment supports pack closure, identification, presentation and dispatch.

06 Induction Sealing Equipment

Applies an induction seal to a compatible container and sealing liner.

PACK / APPLICATION

Compatible bottle or jar packs using an induction-seal liner.

PROCESS OUTCOME

Sealed container opening before final packing.

07 Automatic Bottle/Jar Labelling

Applies the approved product label to the selected bottle or jar.

PACK / APPLICATION

Bottle and jar labels matched to the artwork and pack shape.

PROCESS OUTCOME

Labelled packs with product and brand identification.

08 Batch Coding Equipment

Marks packs with the required batch identification for traceability.

PACK / APPLICATION

Batch information on the agreed pack or coding area.

PROCESS OUTCOME

Coded packs linked to the relevant production batch.

09 Wrapping & Packing Equipment

Supports wrapping and packing of finished products for dispatch.

PACK / APPLICATION

Finished retail packs and the agreed outer packaging.

PROCESS OUTCOME

Packed goods prepared for handling and shipment.

Finishing is coordinated with the approved artwork, packaging brief and batch records.

Quality & facility support

Laboratory checks and air-handling support the production environment.

10 Laboratory & QC Equipment

Batch checks support product consistency and documented quality review.

CHECK AREA	ROLE IN QUALITY CONTROL
pH checks	Compare the batch pH with the applicable product specification.
Viscosity checks	Review product flow and consistency against the selected standard.
Weight checks	Check the filled pack quantity against the agreed pack requirement.
Microbial checks	Support the applicable microbiological quality review for the product.

Supporting records: batch information, traceability and applicable test documentation. Stability testing support is aligned with the product brief.

11 Air Handling Unit (AHU)

Supports air handling and circulation for the manufacturing environment.

ROLE

Air movement and distribution within the manufacturing facility.

PRODUCTION SUPPORT

Helps maintain the working environment alongside facility practices.

Production at facility level

1,000,000
Total units / month

Approx. 30,000
Bottles / day

25,000 sq ft
Facility area

These figures describe overall factory capacity. Output for an individual project depends on the formulation, packaging and production schedule.

D&T™ Dogs & Tiddles | MUNCHOS® PAW CHOICE | Pepa | Big Baby

Trusted by 500+ Clients

Research and Development

Shape the product experience before production. Harrods Health works with your brief to explore texture, fragrance, ingredients and format, then aligns the selected sample with packaging and artwork.

Formulation & Sampling

- Define the category and audience
- Explore texture and fragrance
- Review appearance and application
- Evaluate the selected sample
- Confirm packaging and artwork

Quality Control

- Checks on production batches
- Documented batch records
- Coding and traceability
- Applicable test documentation
- pH and viscosity checks
- Weight and microbial checks
- Stability testing support
- Raw-material documentation

Development supported by quality systems.

Certificates and reports depend on the formulation and destination market.
Regulatory registrations do not imply product approval.

From your brief to dispatch.

A coordinated process for formulation, packaging and finished production.

01

Share your product brief

Define the category, audience, pack size, quantity and target market.

02

Formulation & sampling

Explore texture, fragrance and format, then review the selected sample.

03

Packaging & artwork

Confirm the container, closure, label and artwork for your collection.

04

Production planning

Align the approved sample and pack with order requirements and timing.

05

Manufacturing & quality checks

Coordinate mixing, filling, batch checks, coding and traceability.

06

Packing & dispatch

Complete packing and coordinate dispatch and applicable documentation.

Your brief is the starting point.

For a focused quotation, share:

- **Product category**
- **Pack size & format**
- **Order quantity**
- **Target market**
- **Desired timing**

Sampling, MOQ and lead times are confirmed for each formulation and packaging brief.
